

Recon USB Host Bundle

USB Host Port Connectivity Now Available

Expanding the Recon Universe

The Light Cone USB Host bundle enables Recon owners to explore the world of USB peripherals. This bundle consists of the proven SolarExpress PDA II (CompactFlash USB Host) card. The SolarExpress PDA II is used in HP iPAQs worldwide and in hundreds of Window Mobile USB applications.

In addition to the SolarExpress PDA II card, the bundle contains a Recon USB Host Port CF-Cap. This USB Host CF endcap adheres to Trimble design standards for their CF endcaps. Trimble currently provides Recon CF endcaps for Bar Code Scanners, Bluetooth, GPS, and Wi-Fi 802.11b/g cards.

Recon owners benefit from the USB Host bundle by capitalizing on their existing USB peripherals. These USB peripherals are used across several platforms (i.e. USB flash drives). Users can now have a full USB data connectivity circle: Laptop to Desktop to a Recon handheld. Expand your Recon universe today.
